Charles Darwin University and the Pandemic Quarantine Facility Guide research team acknowledges and respects the many Australian First Nations traditional custodians of the lands upon which our campuses and centres are located.

This extends to the land upon which the Manigurr-ma Village has been established, titled after the Larrakia name for the Stringybark tree, and where the Centre For National Resilience, Howard Springs Quarantine Facility is located.

Did you know

The first case of the Spanish flu pandemic of 1918 arrived in Australia in Darwin.

Due to quarantine policies, the case was isolated at Channel Island and the flu never spread to the community. It wasn't until 1919 when a ship from interstate brought the virus to NT soils that Spanish flu spread across the Territory (interstate vessels not required to quarantine).

Sound familiar?

The landing at the Channel Island quarantine station, which housed Australia's first infected case
